enQ Customer Information &
Billing Solutions for Utilities

enQ Lakehouse

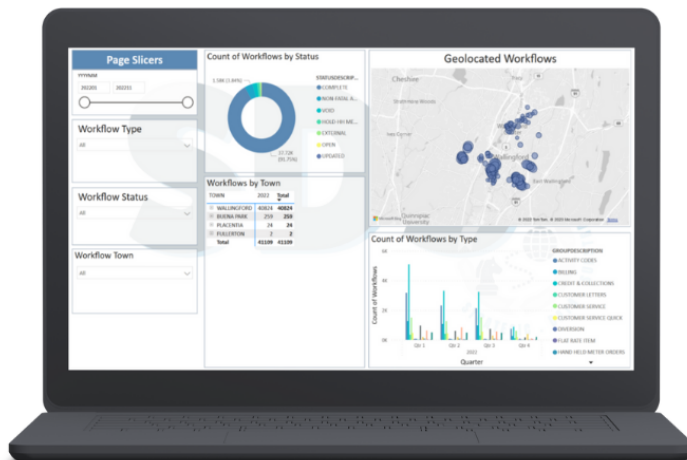

Turn Utility Data Into Actionable Intelligence

The enQ Lakehouse transforms how utilities manage and access data. By merging the flexibility of a Data Lake with the structure of a Data Warehouse, it provides a real-time, centralized hub for all utility data—including external sources beyond your customer information and billing system.

Built with a utility-specific semantic layer, it simplifies finding the right data fast. Even better, it works with any major Business Intelligence tool—no retraining or replacement needed.

Key Benefits

- ✓ Any Data Source
- ✓ Any Business Intelligence Tool
- ✓ Deep Data Insights
- ✓ Intelligent Semantic Layer
- ✓ Real-time Data Access
